

## Blockwise Rainfall Monitoring Scheme (BRMS)

HydroMet Division,  
India Meteorological Department,  
Mausam Bhawan,  
New Delhi - 110003

## **Rainfall Information Services through IRAINS**

IMD Rainfall Information System (**IRAINS**), provides comprehensive rainfall information and rainfall statistics across India at district, state, meteorological sub-division, regional, and national levels. IRAINS disseminates rainfall data based on observations received from multiple meteorological stations and supports monitoring of daily, weekly, seasonal, annual, and cumulative rainfall.

The system presents rainfall information through interactive, color-coded maps indicating **Actual**, **Normal**, and **Departure** rainfall values, enabling quick interpretation of rainfall conditions. These visual products assist users in identifying excess, normal, or deficient rainfall situations across regions.

IRAINS data products are updated on a regular basis following data entry and verification by MCs and RMCs, ensuring accuracy and consistency. The platform also supports graphical analysis, tabular statistics, significant rainfall identification based on thresholds, and automated dissemination through reports and emails.

By integrating real-time data visualization, historical analysis, and dissemination capabilities, IRAINS serves as a centralized operational tool for effective rainfall monitoring, assessment, and decision-making for various stakeholders and the public.

### **Products -**

#### **A. Block Rainfall Monitoring Scheme**

**Block-level rainfall monitoring in IRAINS** provides rainfall information for each administrative block using data from rain-gauge stations located in their respective domain.

Select **Region, MC, RMC, State, District, and Block** using the dropdown menus. Choose the required date and click on Submit to generate block-wise rainfall data for the selected time period and specific area.

To select at **block level**, provide inputs to the appropriate **dropdowns** to have a **hierarchical view** from **Region** to **Block** level.

### 1. Click **Select Regions**

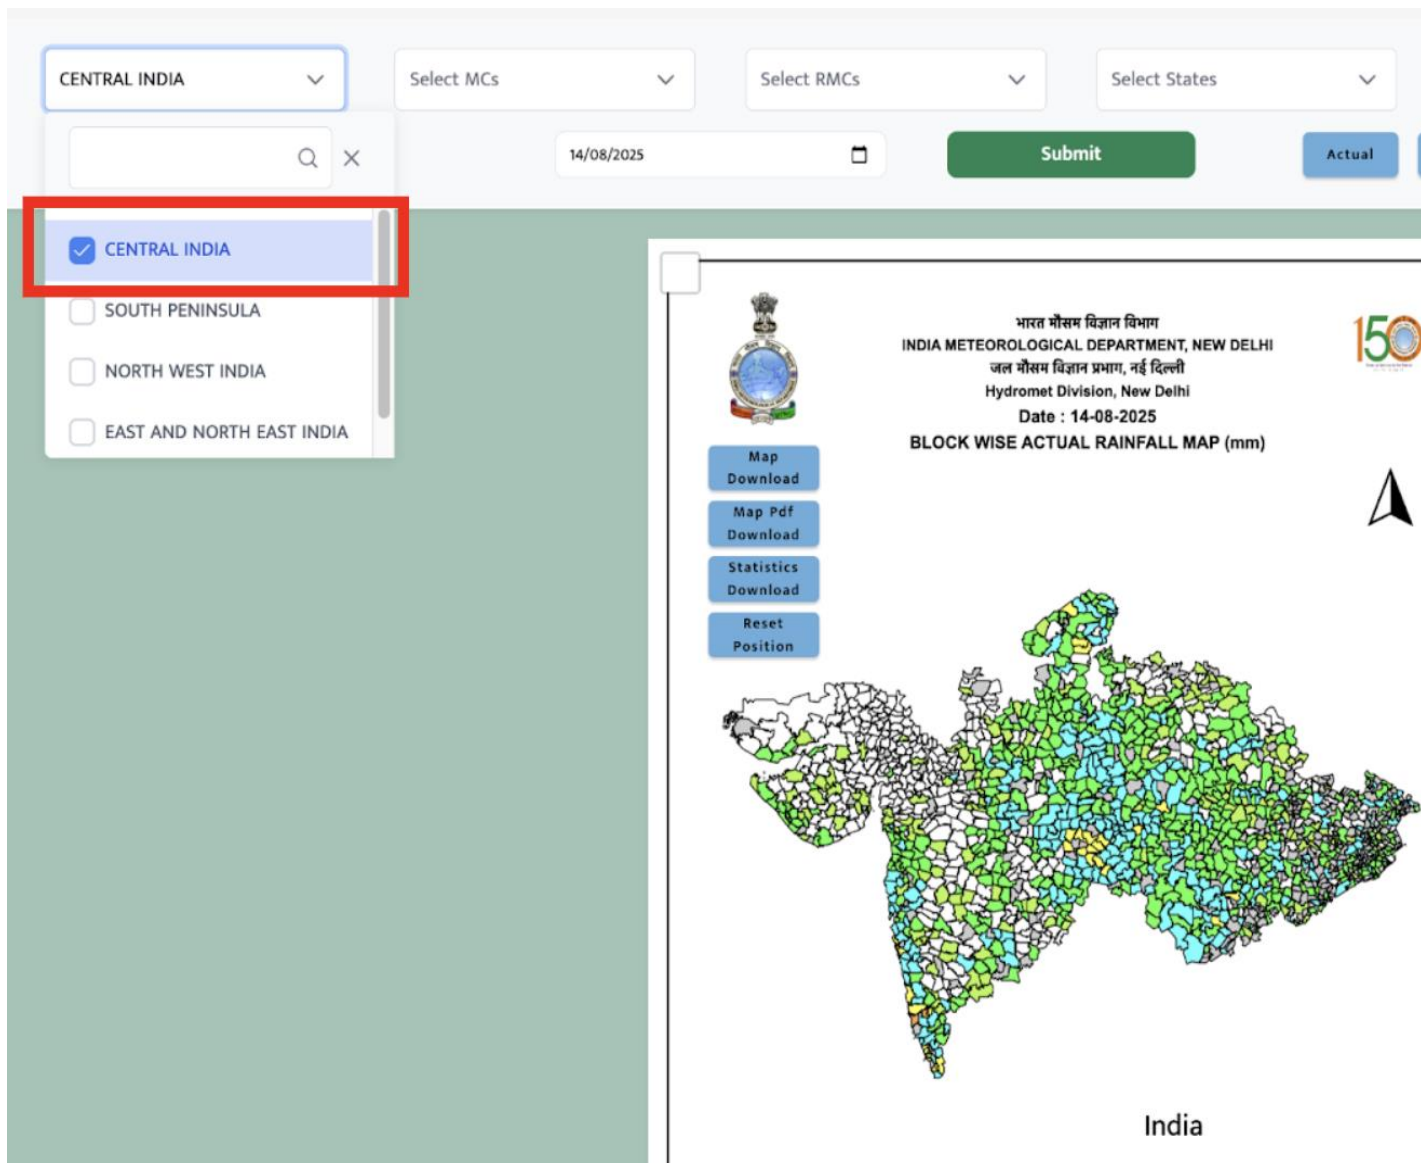

The screenshot displays the India Meteorological Department's Block Wise Actual Rainfall Map interface. The 'Select Regions' dropdown menu is highlighted with a red box, showing the following options:

- ☐ CENTRAL INDIA
- ☐ SOUTH PENINSULA
- ☐ NORTH WEST INDIA
- ☐ EAST AND NORTH EAST INDIA

The interface also includes the following elements:

- Select MCs** dropdown
- Select RMCs** dropdown
- Select States** dropdown
- Date** field: 14/08/2025
- Submit** button
- Map Download** button
- Map Pdf Download** button
- Statistics Download** button
- Reset Position** button
- India** label on the map

2. Click **Central India**; now only the blocks under the Central India Region are visible.

3. Now select either the **MC dropdown** or **RMC dropdown** to view the **regions** under the selected **Meteorological provision**.

11. Similarly, click the “Departure” to view the departure map at block level for the selected map.

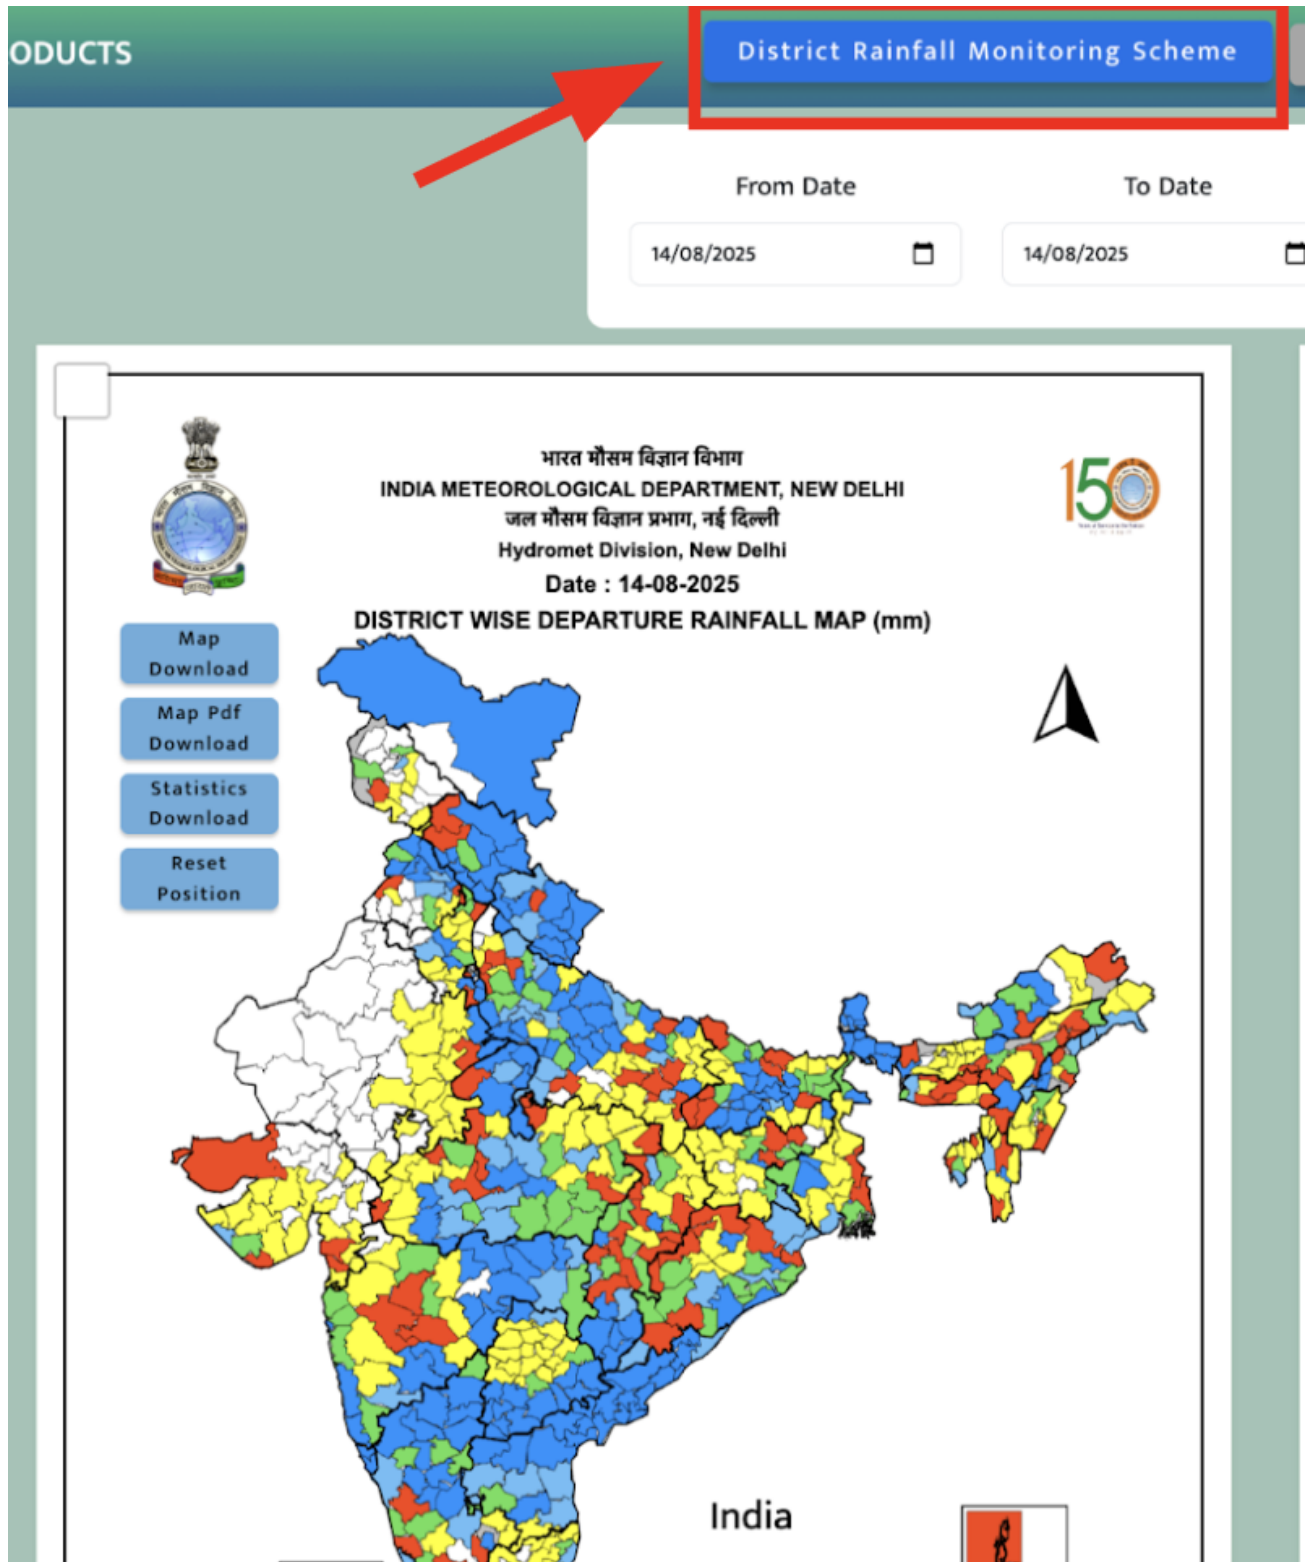

## **B. District Rainfall Monitoring Scheme**

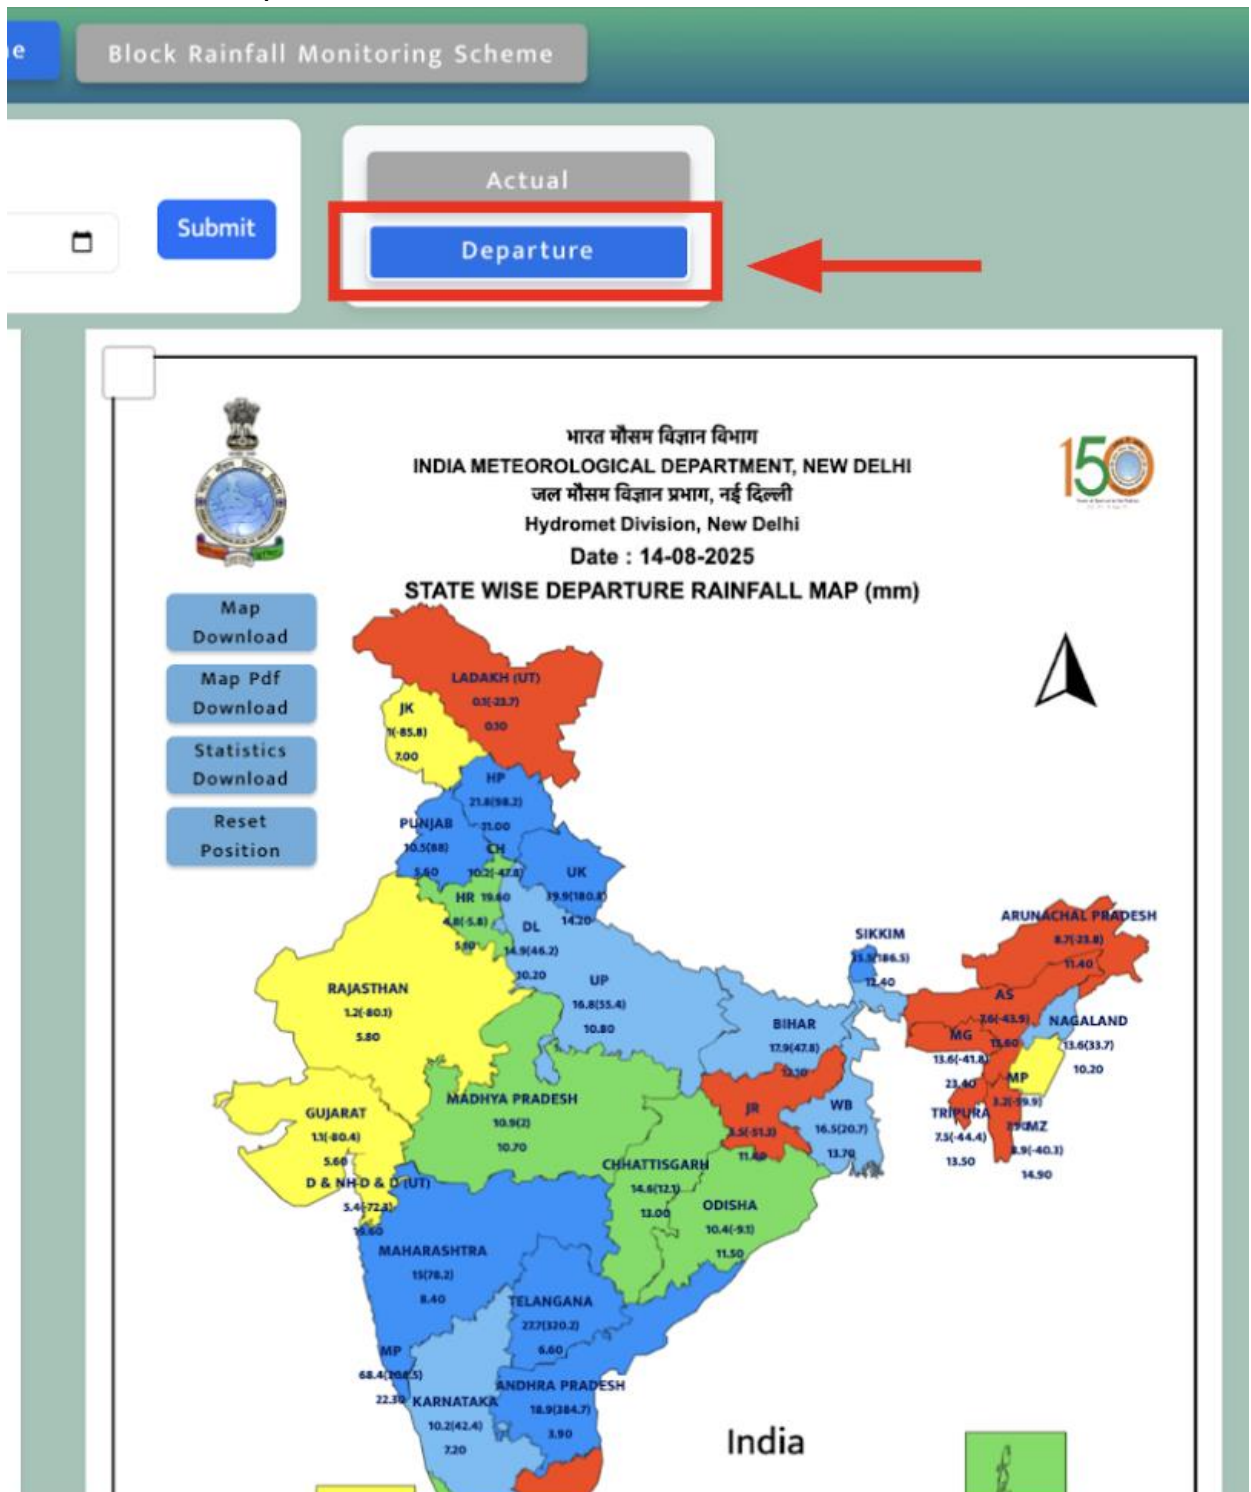

**District-level rainfall monitoring in IRAINS** provides rainfall information for District level to Region level using data from observations such as rain-gauge stations, automatic weather stations in their region. Here we have a total of four maps for both Actual rainfall and Departure.

1. District Map
2. State Map
3. Subdivision Map
4. Region Map

1. Go to the District Rainfall Monitoring Scheme.

- Click on **Departure** to view departure maps or **Actual** to view actual rainfall maps.

3. Click on **Map Download** to download the map image.

## D - Significant Rainfall

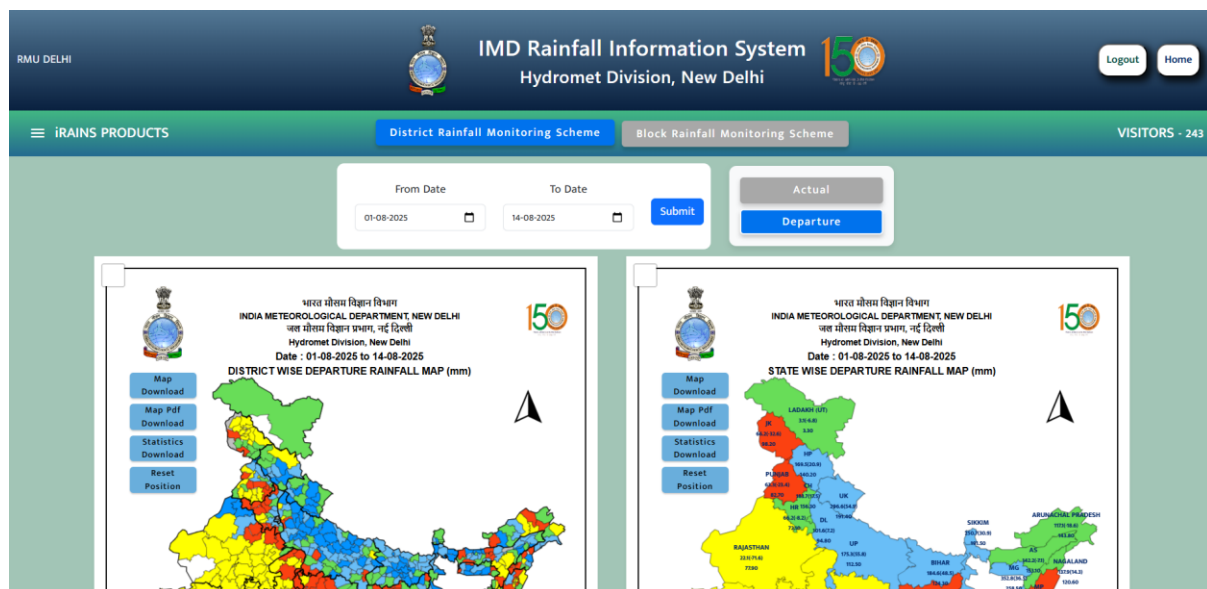

Significant Rainfall highlights stations that have received rainfall above a specified threshold.

By default, it shows rainfall without any range, and users can apply a custom rainfall range to filter and view only significant rainfall events.

This feature helps quickly identify areas experiencing notable or heavy rainfall and allows the data to be downloaded in report formats.

To access the ‘Significant Rainfall’ at the iRAINS, kindly follow the following steps.

- Go to the iRAINS webpage at <https://irainshydro.imd.gov.in/all-maps>. The following screen will appear.

- Click on the iRAINS PRODUCT as encircled below and then click on ‘Significant Rainfall’.

## G - Yearly Station Statistics

**Yearly Station Statistics** provides annual rainfall data for selected stations based on chosen region, state, district, and date range.

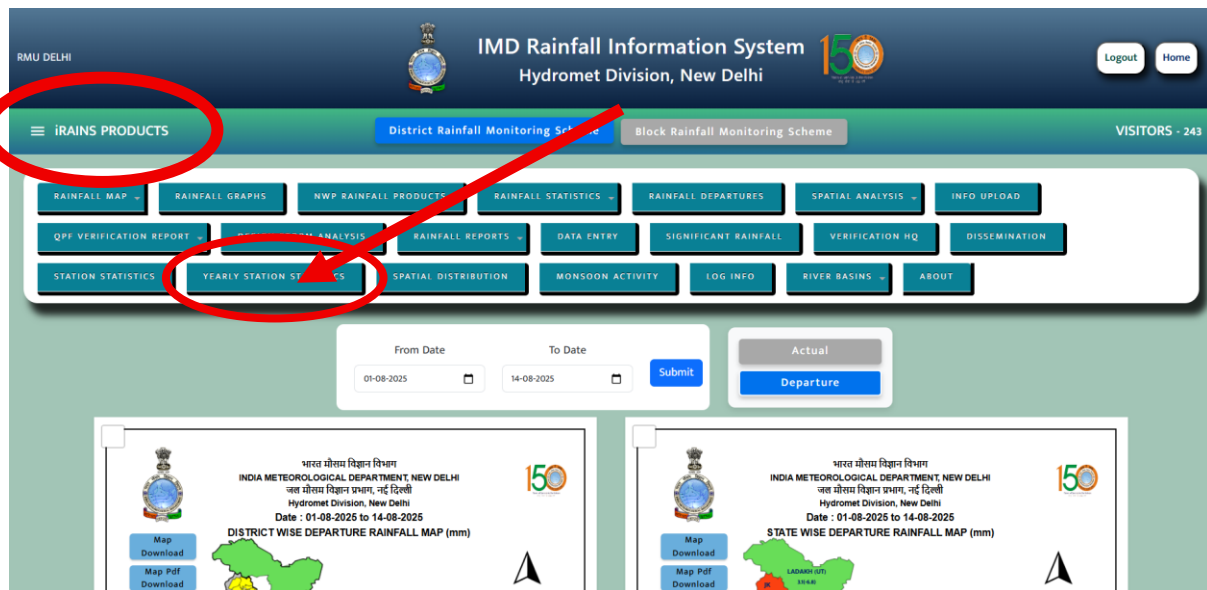

It displays station details along with day-wise rainfall values aggregated for the year. The data can be downloaded for analysis, reporting, and record purposes.

To access the 'Yearly Station Statistics' at the iRAINS, kindly follow the following steps.

- a. Go to the iRAINS webpage at <https://irainshydro.imd.gov.in/all-maps>. The following screen will appear.

- b. Click on the iRAINS PRODUCT as encircled below and then click on 'Yearly Station Statistics'.

- c. You can filter data by geographical region, RMCs, states, districts, and individual stations, then select a from-to date period and submit the query. The resulting table displays detailed station metadata (state, district, station name, ID, latitude, longitude) along with daily rainfall values for each date in the selected period. The data can be downloaded for further analysis or reporting..

## H - Spatial Distribution

**Spatial Distribution** displays the geographical spread of rainfall data reported across subdivisions using color-coded maps.

It helps visualize rainfall intensity patterns over a selected date or period.

This view is useful for understanding area-wise rainfall distribution and comparison.

To access the 'Spatial Distribution' at the iRAINS, kindly follow the following steps.

- e. Go to the iRAINS webpage at <https://irainshydro.imd.gov.in/all-maps>. The following screen will appear.

- f. Click on the iRAINS PRODUCT as encircled below and then click on 'Spatial Distribution'.

- g. You will be directed to the spatial distribution overview, where you can switch between subdivision-wise and state-wise views, search for specific regions, and select a date or date range to retrieve rainfall data. You can toggle between period-wise and day-wise views and download the displayed results as a PDF for reporting or reference purposes.

| Subdivision                      | Total Stations | Stations Reported Rainfall | Percentage | Category          |
|----------------------------------|----------------|----------------------------|------------|-------------------|
| ANDAMAN & NICOBAR ISLANDS        | 8              | 7                          | 87.50%     | Widespread        |
| ARUNACHAL PRADESH                | 94             | 64                         | 68.09%     | Fairly Widespread |
| ASSAM & MEGHALAYA                | 244            | 185                        | 75.82%     | Widespread        |
| BIHAR                            | 493            | 478                        | 96.96%     | Widespread        |
| CHHATTISGARH                     | 248            | 486                        | 98.18%     | Widespread        |
| COASTAL ANDHRA PRADESH & YANAM   | 146            | 116                        | 79.45%     | Widespread        |
| COASTAL KARNATAKA                | 50             | 34                         | 68.00%     | Fairly Widespread |
| DELHI AND HARYANA AND CHANDIGARH | 251            | 188                        | 74.90%     | Fairly Widespread |

## I - Monsoon Activity

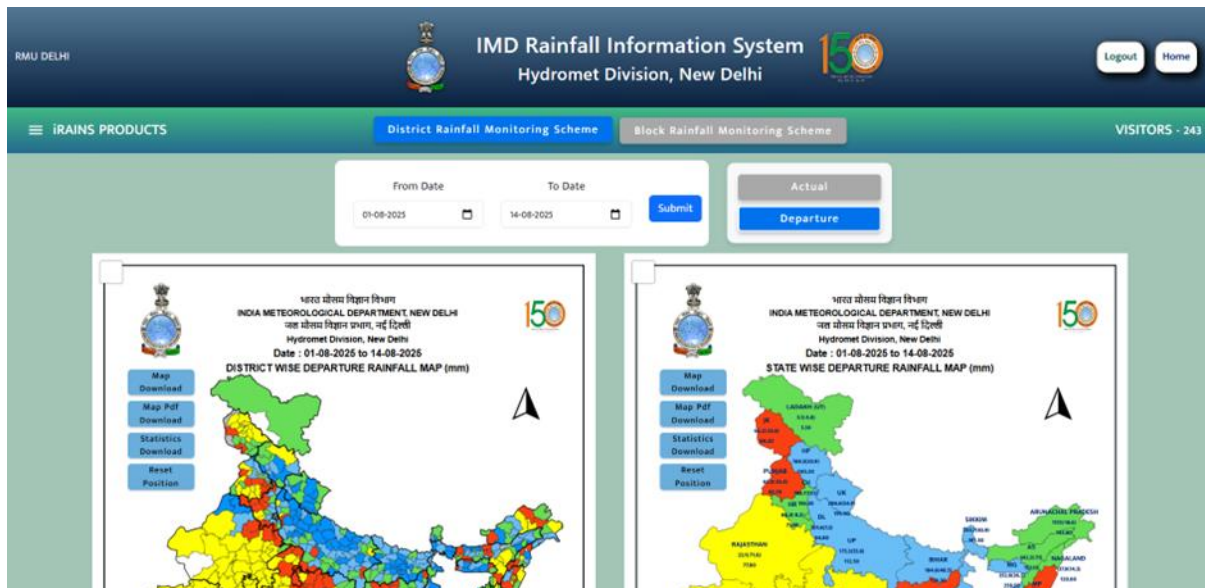

**Monsoon Activity** allows users to select a date and view the corresponding monsoon activity across India.

It displays a colour-coded map showing rainfall intensity categories along with a subdivision-wise tabular summary.

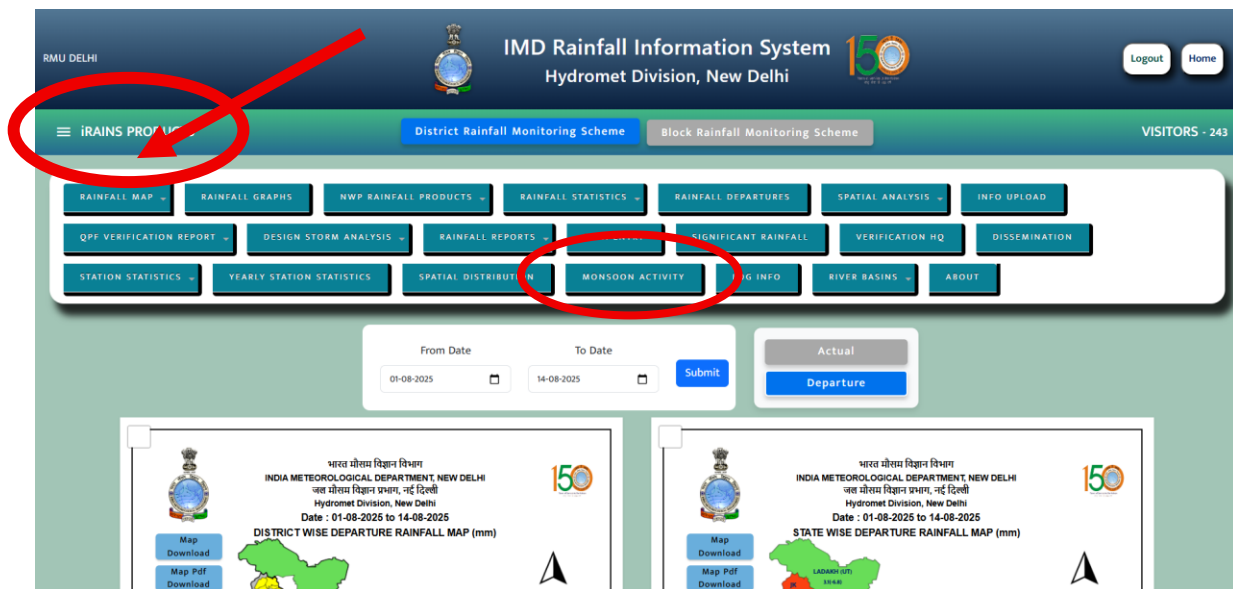

The table includes average actual rainfall, normal values, deviation ratio, and status, and both map and data can be downloaded for analysis and reporting.

To access the 'Monsoon Activity' at the iRAINS, kindly follow the following steps.

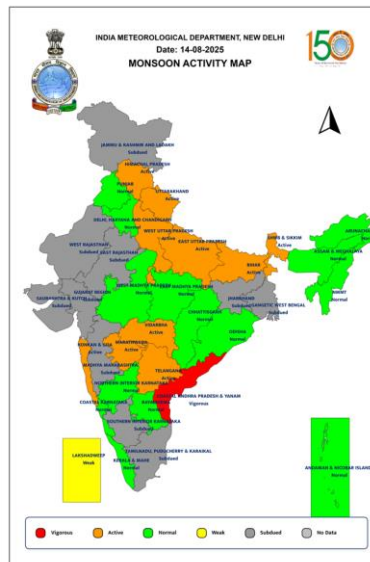

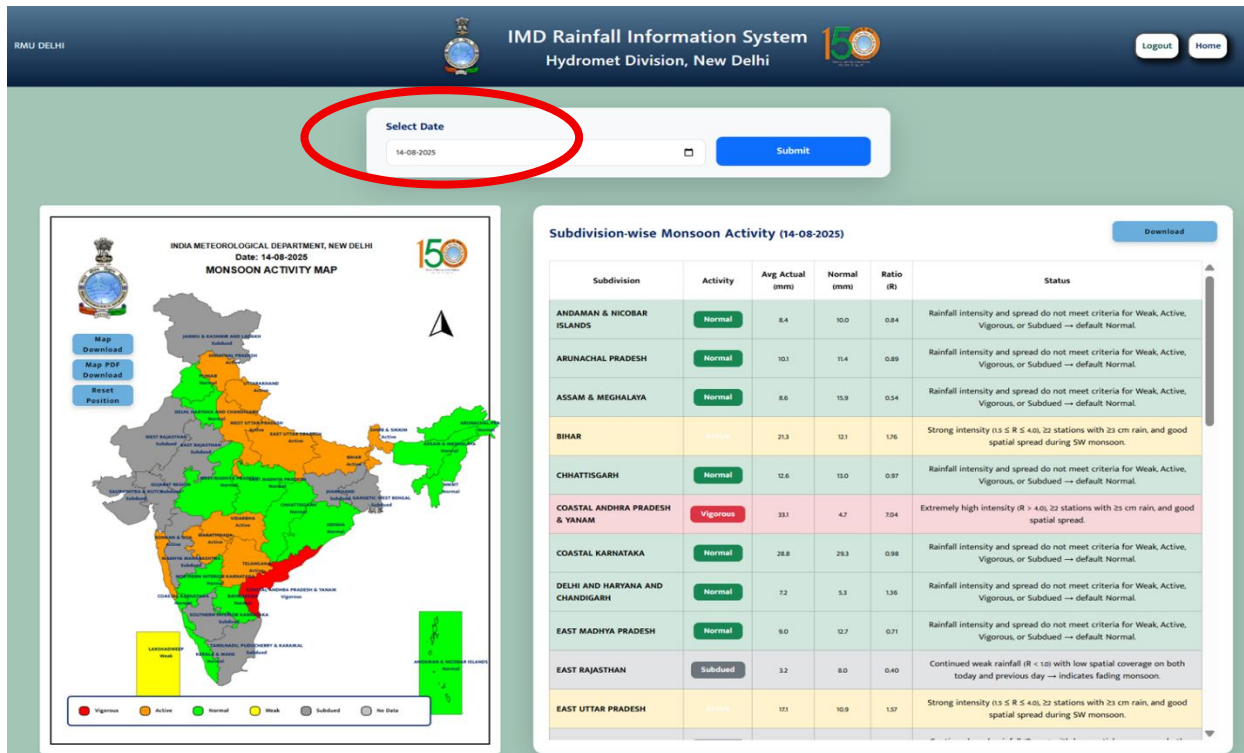

- h. Go to the iRAINS webpage at <https://irainshydro.imd.gov.in/all-maps>. The following screen will appear.

- i. Click on the iRAINS PRODUCT as encircled below and then click on 'Monsoon Activity'.

- j. You can choose a date and submit it to view the corresponding monsoon activity map and tabular summary. The screen presents a colour-coded map showing rainfall intensity categories across India. It also lists rainfall activity by subdivision along with average actual rainfall, normal values, deviation ratio, and status descriptions. You can download the map and data for reporting and analysis purposes.
